

DIAGNOSTICS

Unplug range or disconnect power before performing the following checks:

- The most common cause for control failure is corrosion on connectors. Therefore, disconnecting and reconnecting wires will be necessary throughout test procedures.
- Check all connections before replacing components, looking for broken or loose wires, failed terminals, or wires not pressed into connectors far enough.
- All tests/checks should be made with a VOM or DVM having a sensitivity of 20,000 ohms per volt DC or greater.

Resistance checks must be made with power cord unplugged from outlet, and with wiring harness or connectors disconnected.

Temperature Adjustment

- Press and hold BAKE pad for five (5) seconds. Current offset, if any, is shown in 3-digit display. CAL is shown in 4-digit display (3 digits on right).
- Pressing the TEMP pad "up" arrow (▲) adjusts the temperature in 10°F increments in the following sequence: 0°, 10°, 20°, 30°, -30°, -20°, -10°, 0°, and so on.
- Press START/ENTER pad to activate the desired temperature adjustment. If the

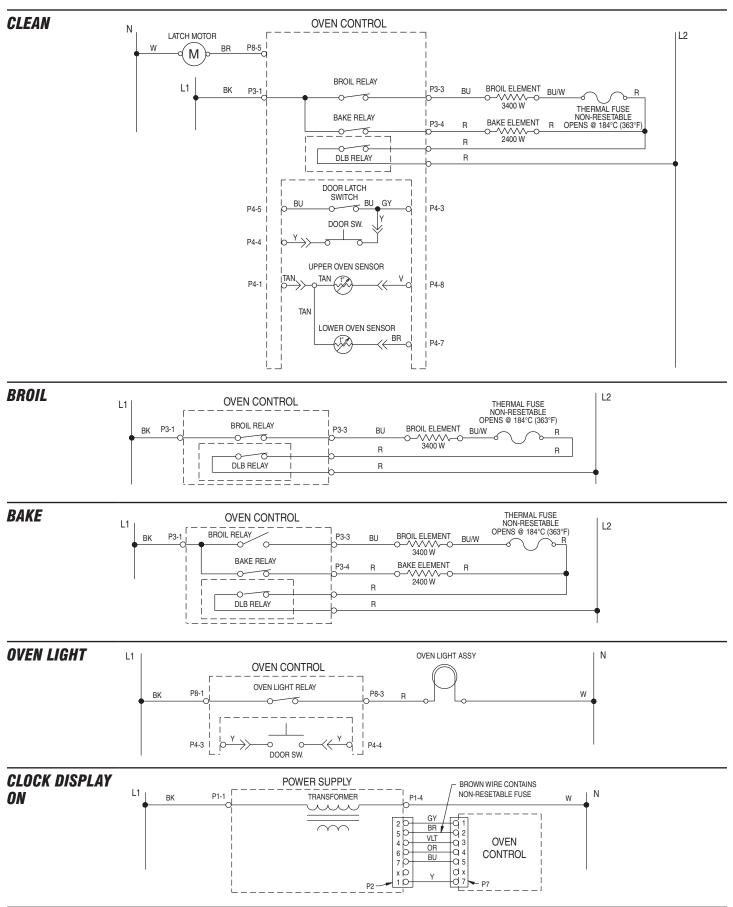

START/ENTER pad is not pressed within 5 minutes, adjustment is ignored.

- BAKE temperature adjustment cannot result in operating temperatures higher than 525°F or lower than 170°F, as measured at oven cavity center.
- Once the BAKE temperature has been adjusted, BROIL temperatures are automatically offset to the same degree.
- CLEAN temperature is also offset automatically when BAKE temperature is adjusted. If BAKE temperature has been raised, CLEAN temperature is offset +5°F. If BAKE temperature has been lowered, CLEAN temperature is offset -5°F.

FAILURE/ERROR DISPLAY CODES

4-DIGIT DISPLAY	3-DIGIT DISPLAY	LIKELY FAILURE CONDITION	SUGGESTED CORRECTIVE ACTION PROCEDURE
FO	EO	Factory default - not an error.	No action required.
F1	EO	EEPROM communications error	1. Verify failure if not displayed, using CANCEL/OFF key. Press key for 5 seconds until last error code is displayed.
	E1	EEPROM checksum error	 Unplug range or disconnect power longer than 30 seconds. Plug in range or reconnect power and observe for longer than 1 minute.
	E2	UL A/D error(s)	 Filig in range or reconnect power and observe for longer than 1 minute. If failure remains, go to step 5. Unplug range or disconnect power.
	E4	Model ID error	
	E6	Latch signal mismatch error	6. Replace control.
	EO	Shorted key	1. Verify failure if not displayed, using CANCEL/OFF key. Press for 5 seconds.
F2	E1	Key tail unplugged	 Unplug range or disconnect power. If applicable, ensure membrane tail is seated in connector on back of control. Plug in range or reconnect power and observe for longer than 1 minute. If failure remains, go to step 6. Unplug range or disconnect power. Replace control.
F3	EO	Oven sensor opened - Top	1. Unplug range or disconnect power.
	E1	Oven sensor shorted - Top	2. Disconnect sensor from harness.
	E2	Bake/broil range over temperature	3. Measure sensor value (between connector pins) between 1000 Ω @ 32° F and 2697 Ω @ 900° F (room temperature approx. = 1080 Ω). Also measure from sensor connector to sensor casing for possible short. If measurement does not correlate to real temperature, or if short is found, replace sensor.
	E3	Clean range over temperature	4. Trace wires and connectors to sensor from control, then back to control. If wire or connection is damaged, replace
	E4	Oven sensor opened - Bottom	the harness. 5. Reconnect the sensor to the harness.
	E5	Oven sensor shorted - Bottom	 Plug in range or reconnect power and observe for longer than 1 minute. If failure remains, go to step 8. Unplug range or disconnect power. Replace control.
F3	E6	Warming drawer sensor open	1. Same corrective action as for other F3 codes, with the exception that the warming drawer resistance value at room
	E7	Warming drawer sensor shorted	temperature is approx. 100k Ω .
F5	EO	Door switches do not agree	 Unplug range or disconnect power. Check wires and connectors from control to door switch, then from door switch to control. If no damage to wires or connectors, replace door switch. Plug in range or reconnect power. Press CANCEL/OFF key. Program and start the CLEAN mode, and observe for one minute to ensure that operation is normal. If failure remains, go to step 7. Unplug range or disconnect power. Replace control.
F5	E1	Door latch not operating	 Verify error code by pressing and holding CANCEL/OFF key for 5 seconds. Momentarily (less than 5 sec.) press CANCEL/OFF key again to remove error code display. Program and start the CLEAN mode. Observe to see if door locks. If it does not, inspect the locking mechanism from the latch motor to the latch pawl and door to find the cause of the problem. If the door is not locking, then 1 minute from the start of the CLEAN, the F5 E1 code will again be displayed. Press CANCEL/OFF key to remove error code display. Once any mechanical problems with the latch mechanism have been corrected, program and start a CLEAN cycle (after, if necessary, clearing F5 E1 error code) to ensure proper operation of the door lock. Immediately cancel the CLEAN mode to observe proper operation of door unlock.
F8	EO	N/A	N/A

The following individual circuits are for use in diagnosis, and are shown in the ON position. **Before starting diagnosis, check the line voltage and for blown fuses.**
